Electrostatic Discharge - Fuze

This part is considered to be sensitive to electrostatic discharge. All containers and paperwork must be marked accordingly.

Regardless of ESD class all parts are required to be packaged and shipped in static dissipative Amine-free metallized shielding bags. Reference MIL-PRF-81705.

ESD Class1 and 2 – All leads must be shorted by material having a surface resistivity (r_s) between $1E5$ and $1E12$ OHMs per square.

All external and internal packaging shall be properly identified with an ESD sensitive device attention label. Reference MIL-STD-129, figure 37.

“Pink Poly” (Polyethylene Antistatic) bags or material is an unacceptable medium and shall not be used.
